## Education

### Michigan State University, College of Engineering

Bachelor of Science, Computer Science

Computational Mathematics, Science & Engineering (CMSE) minor

Business cognate

GPA: 3.84

Jan 2021 – April 2024

## Professional Experience

### *Software Engineer – One Community Global*

2024 - 2025

- Volunteered as a MERN (React.js/MongoDB) full-stack developer to build open-source Highest Good Network software.
- Trained as a team manager, helped manage a team of 7, and raised PR issues to improve task allocation and progress tracking.
- Reviewed over 40 PRs & created 15+ PRs, including developing new components, adding features, and fixing critical bugs.

### *Enhanced Video Assistant (EVA) – TechSmith*

2024

- Developed a production-grade video assistant app as a capstone project, awarded by Auto-Owners among 300 participants.
- Integrated machine learning models to automate audio enhancement, multi-layered feedback & condense video to key moments.
- Managed the app deployment on Azure web services with Docker, for better scalability and reliability.

### *Info-Tech Assistant Intern – CMSE Department at MSU*

2023 – 2024

- Engineered and deployed software solutions to optimize data management process across departmental platforms.
- Devised software to automate merging & reformatting data from multiple sources to create efficient & up to date SQL database.
- Facilitated transition from an outdated format to a new, optimized structure, enhancing the accessibility and relevance of data.

## Projects

### *AutoVE: Automate video-editing*

C++, wxWidgets, Electron, FastAPI, Python, LLM, GroqInc, Docker

- Developed a video editing tool that enables text-to-video edits by analyzing and executing text-described actions.
- Implemented a backend in Python and FastAPI to process text inputs, detect actions, extract parameters, and determine edits.

### *Picko : Personalized Recommendation App*

React Native, Typescript, Expo, Python, FastAPI, AWS, Vercel

- Developed a recommendation engine using ML techniques (TF-IDF, cosine similarity, semantic search) for personalized movies, TV shows, and books suggestions and deployed app on iOS and Android stores.
- Built an over 300,000-item SQL database with tools like SQLAlchemy and SQLModel for high concurrency and efficiency.

### *PyOrcid : Open-source lib for Orcid Integration*

Python, OrcidAPI, PyTests

- Developed an API client for ORCID to help researchers and academic institutions worldwide track and sync their publications.
- Implemented scrapers and methods to access public & private data, automating profile management with 1000+ downloads.

### *Text-to-Action: Natural queries to programmatic actions*

Python, Transformers, LLM, PyTorch, sPacy

- Built open-source system to enable automation for applications by translating natural language queries to programmatic actions.
- Designed vector-store, parameter-extractor components for efficient similarity search using LLM & NER for query processing.
- With over 1500+ installs, it supports use cases like API interfaces, chatbots, automated task systems, & voice-controlled apps.

## Skills

- **Frameworks:** React (JS & Native), Django, FastAPI, Expo, wxWidgets, Docker, FFMPEG
- **Full stack:** Python, C++, JavaScript, HTML, CSS
- **Data and ML related:** SQL, SQLite, MongoDB, Supabase, scikit-learn, Azure, PyTorch, Generative AI, LLMs

## Awards and Achievements

- [\\$75,000 scholarship](#), 2021-2024, MSU
- [Best Emerging Technology Award](#), January 2023, Brainwaive
- [Auto-Owners Exposition Award](#), April 2024, EVA
